

# PassGen - Generate, and store secure passwords

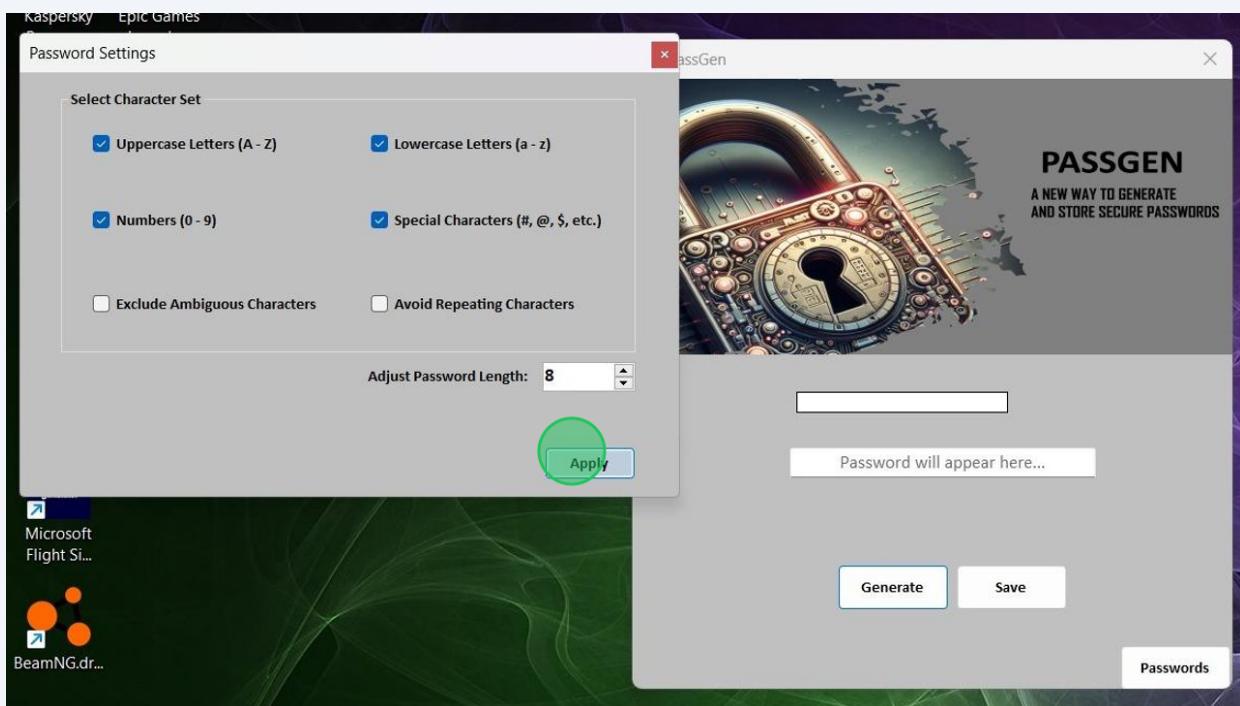

A Quick User Start-up Guide.

1

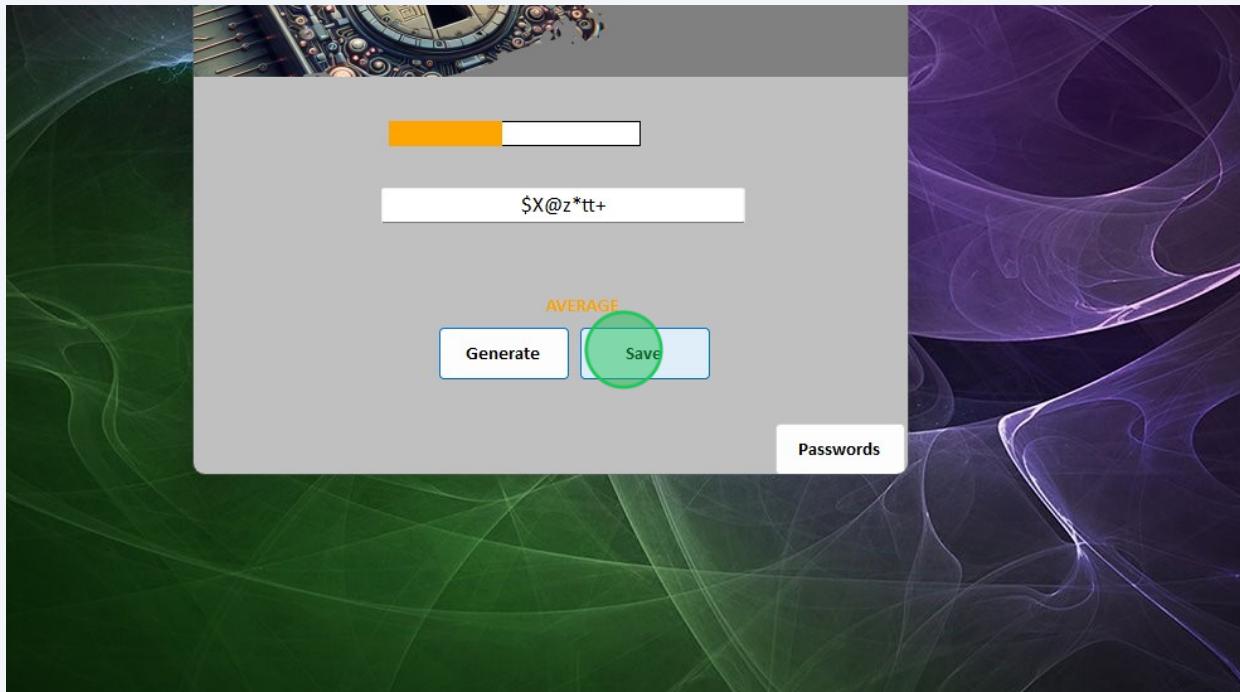

After launching the App, click "Generate" to initiate the password generation.

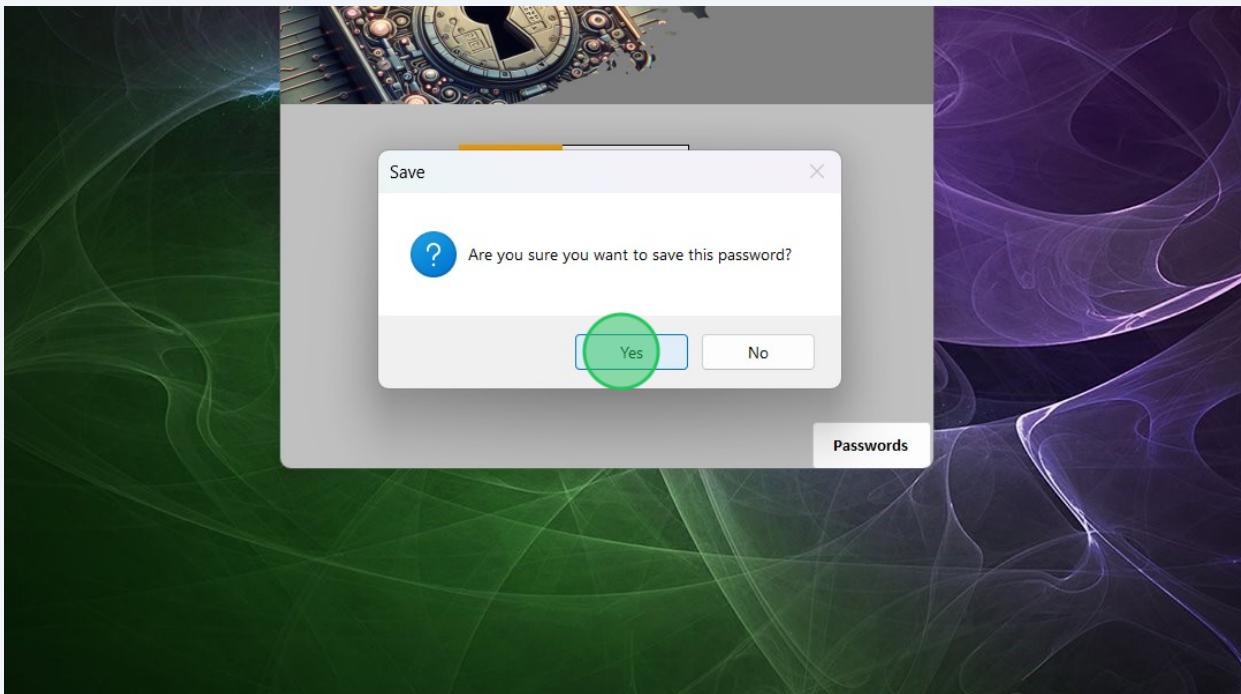

- 2 After you select which rules to apply to the new password, click "Apply".

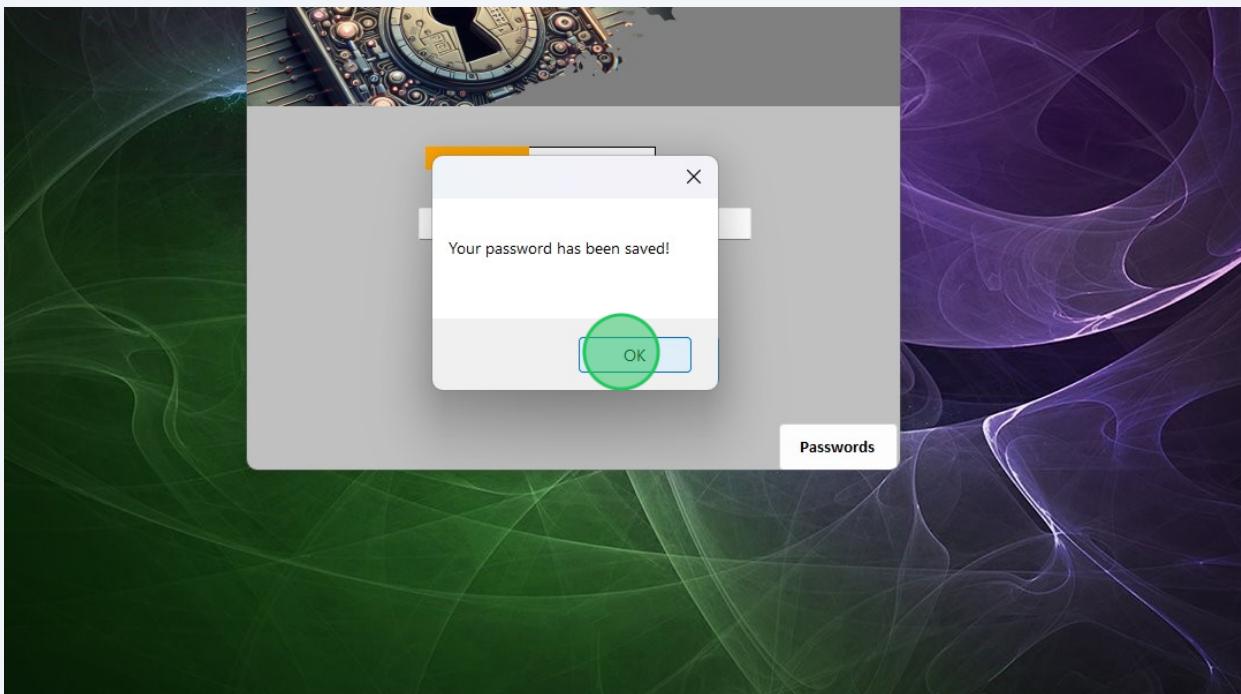

- 3 The home screen will now display the created password as well as provide a calculated estimate on the strength of it. Click "Save" to encrypt and save the password in the database.

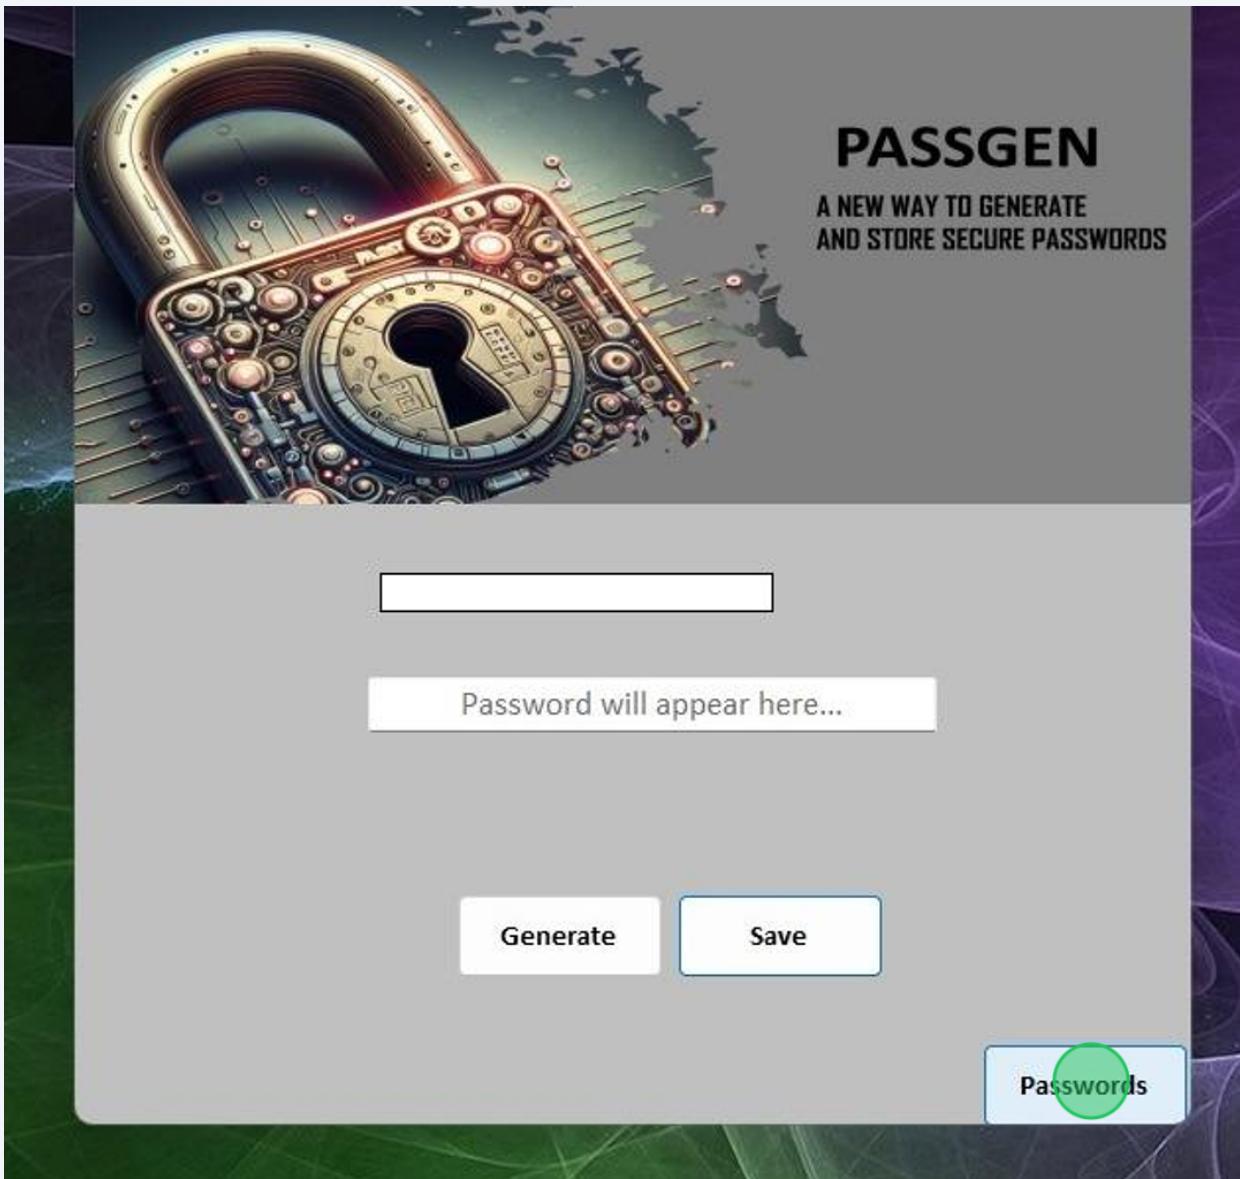

4 Click "Yes" to confirm.

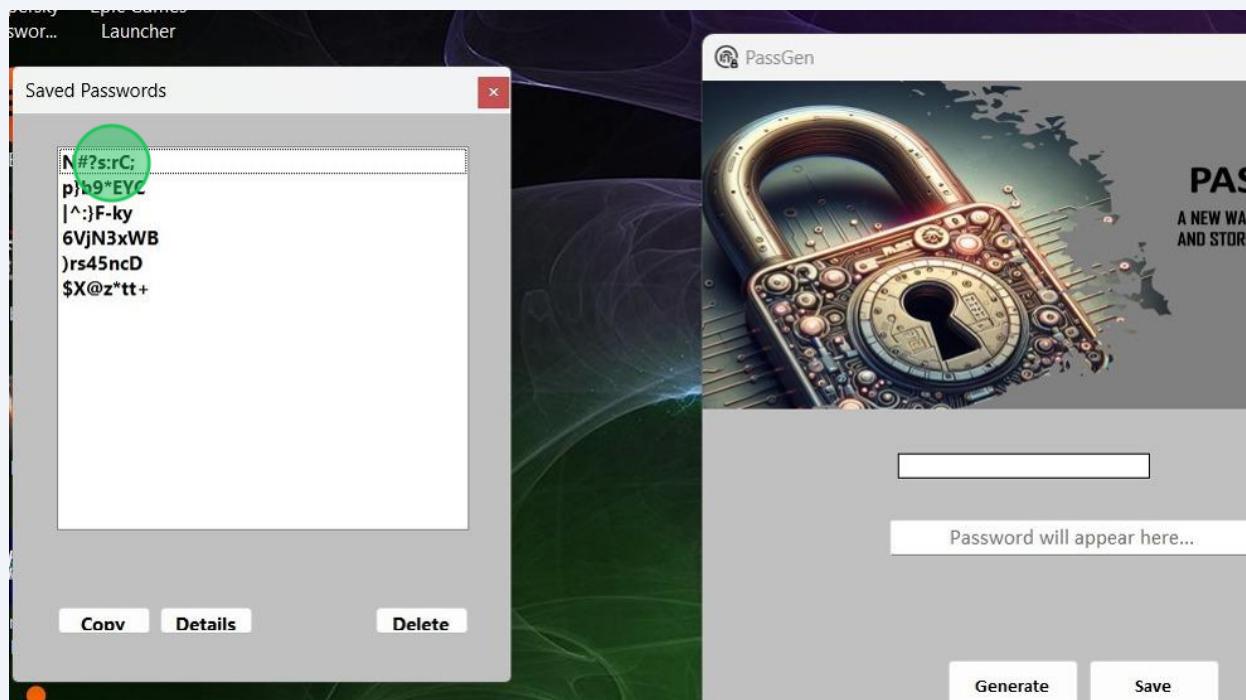

5 Prompt will show successful save. Click "OK" to continue.

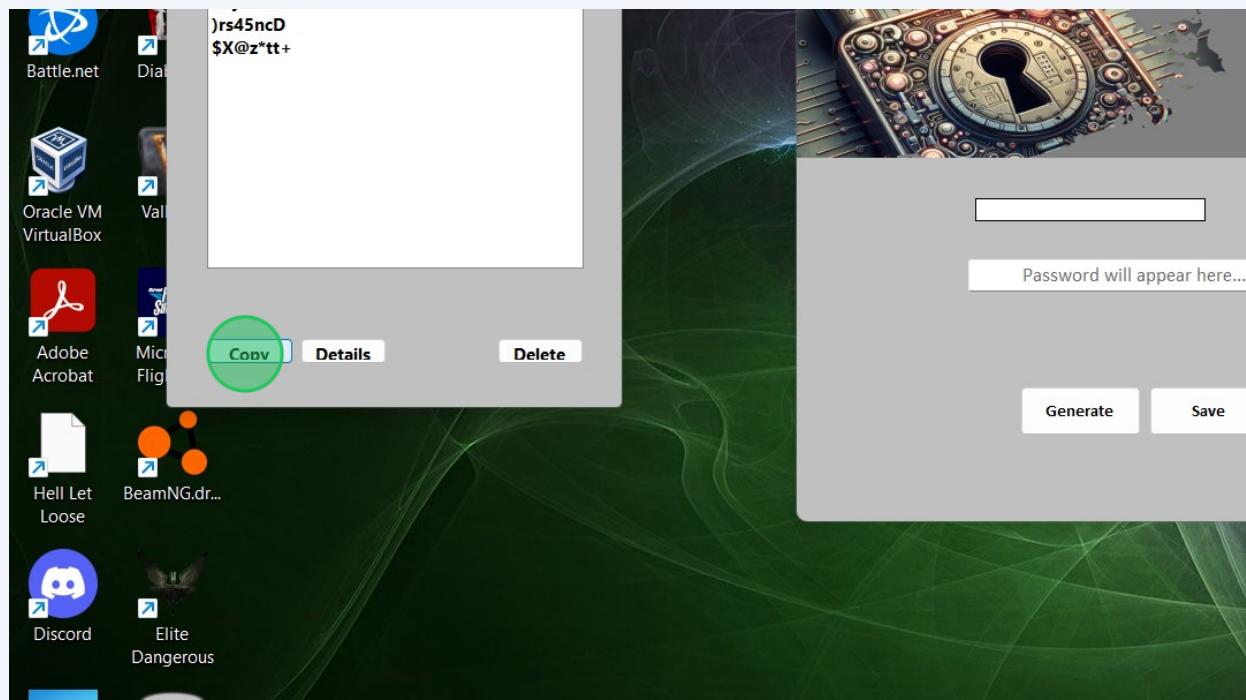

- 6 Click "Passwords" to view currently saved passwords in the database.

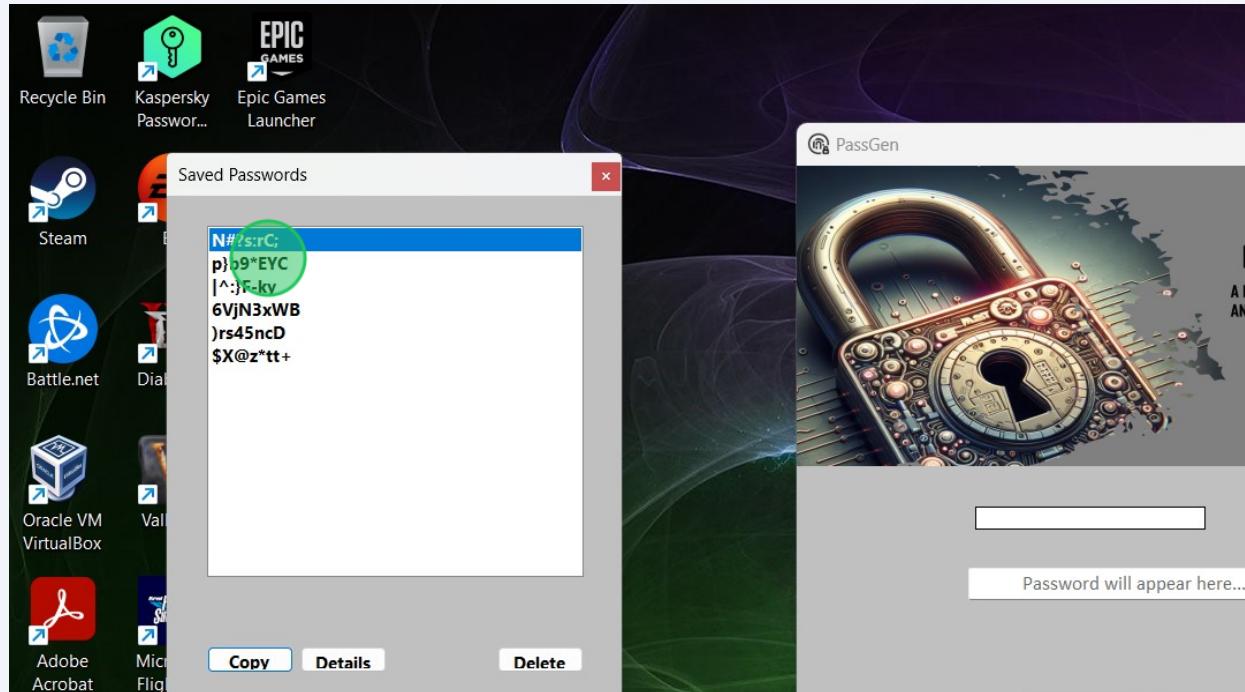

- 7 To copy a password, select the desired password. In this case we will choose "N#?s:rC;"

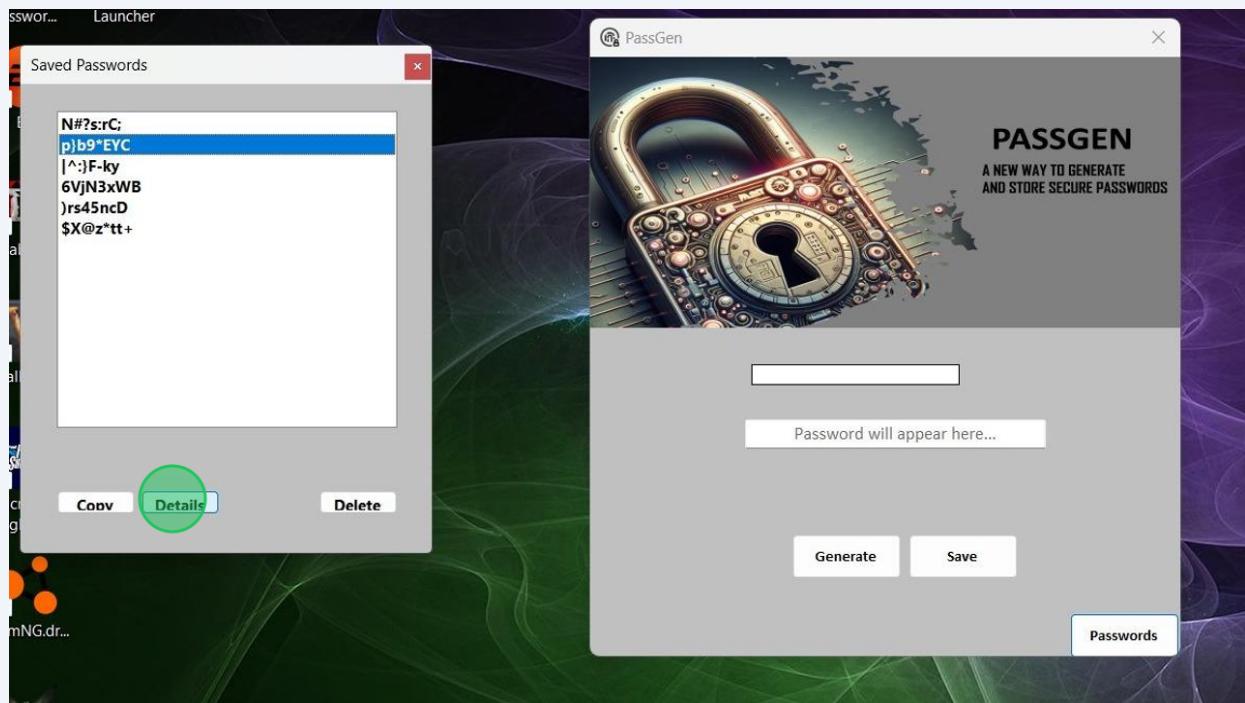

- 8 Click "Copy"

- 9 To see the details of a password, first select it, in this example we will choose the password "p}b9\*EYC".

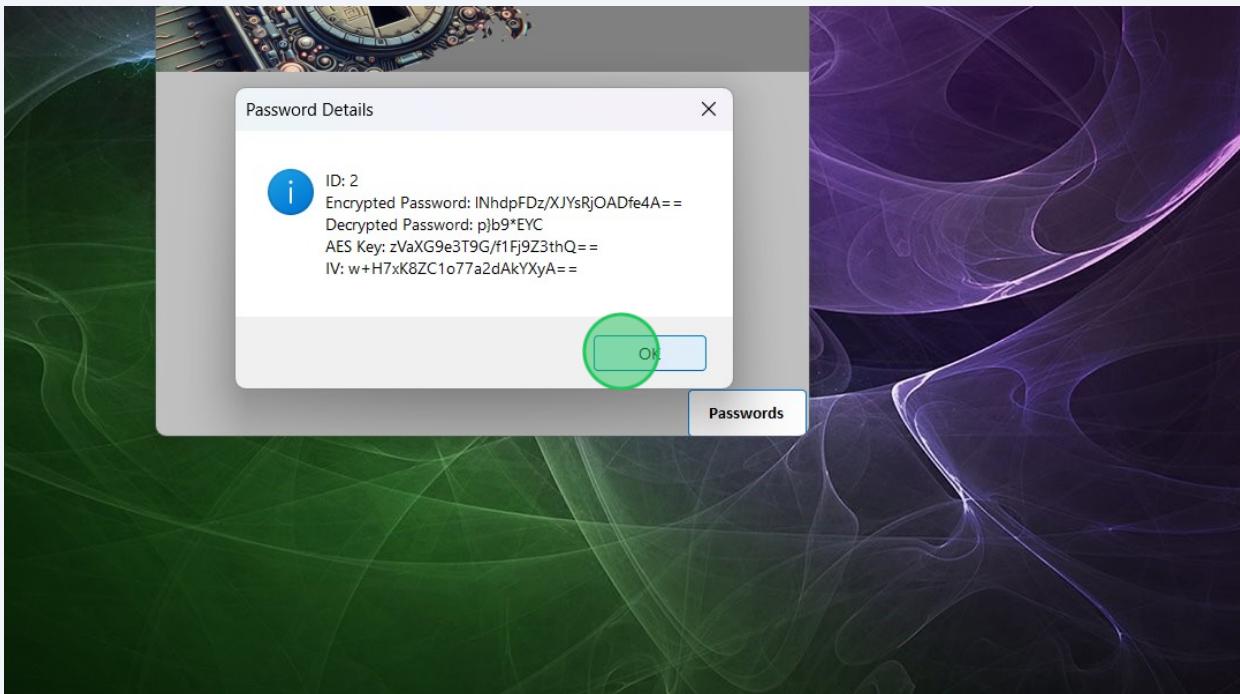

- 10 Click "Details"

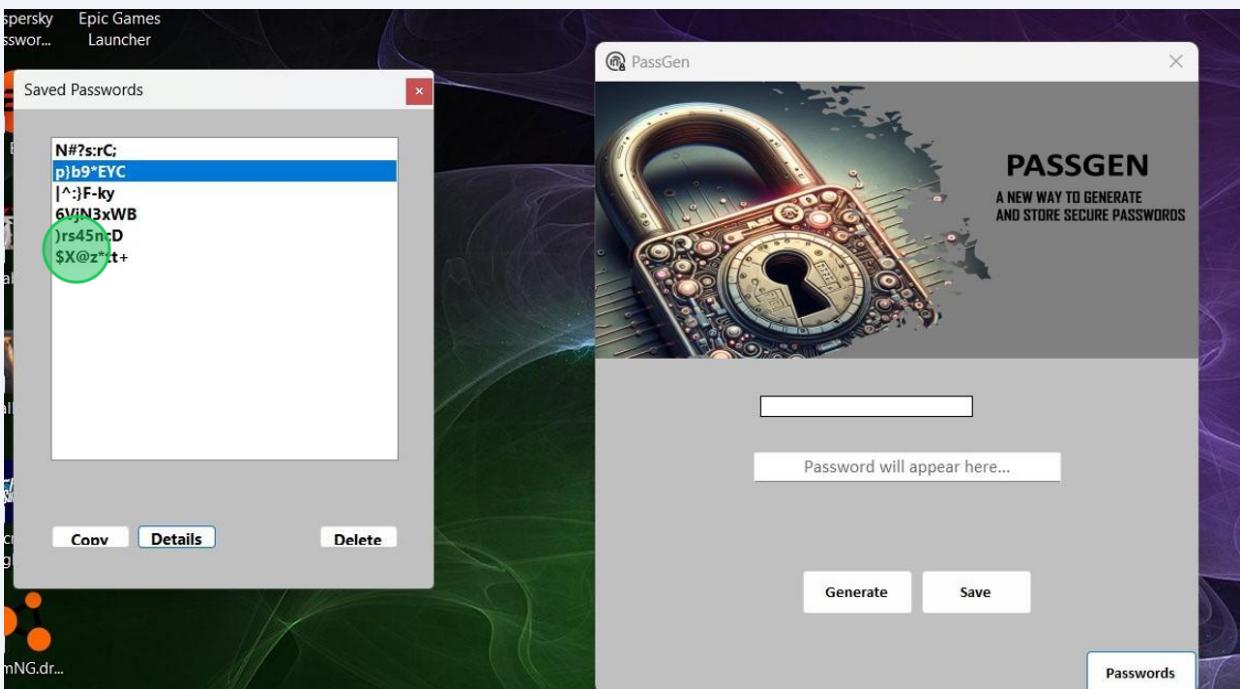

11

A window will then pop up and display the details of the password. Click "OK" to continue.

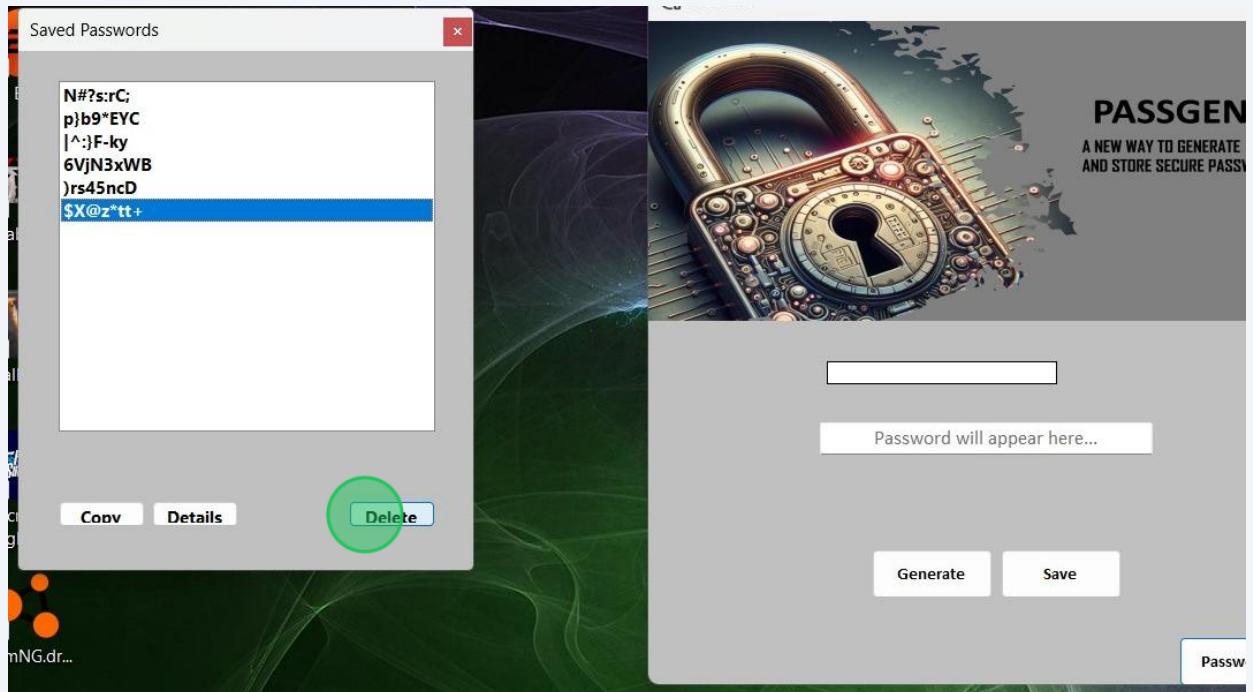

12

To delete a password, first select it, for this example we will select "\$X@z\*tt+" to delete.

**13** Click "Delete"

**14** To confirm permanent deletion, click "Yes"
