

# PassGen - Generate, and store secure passwords

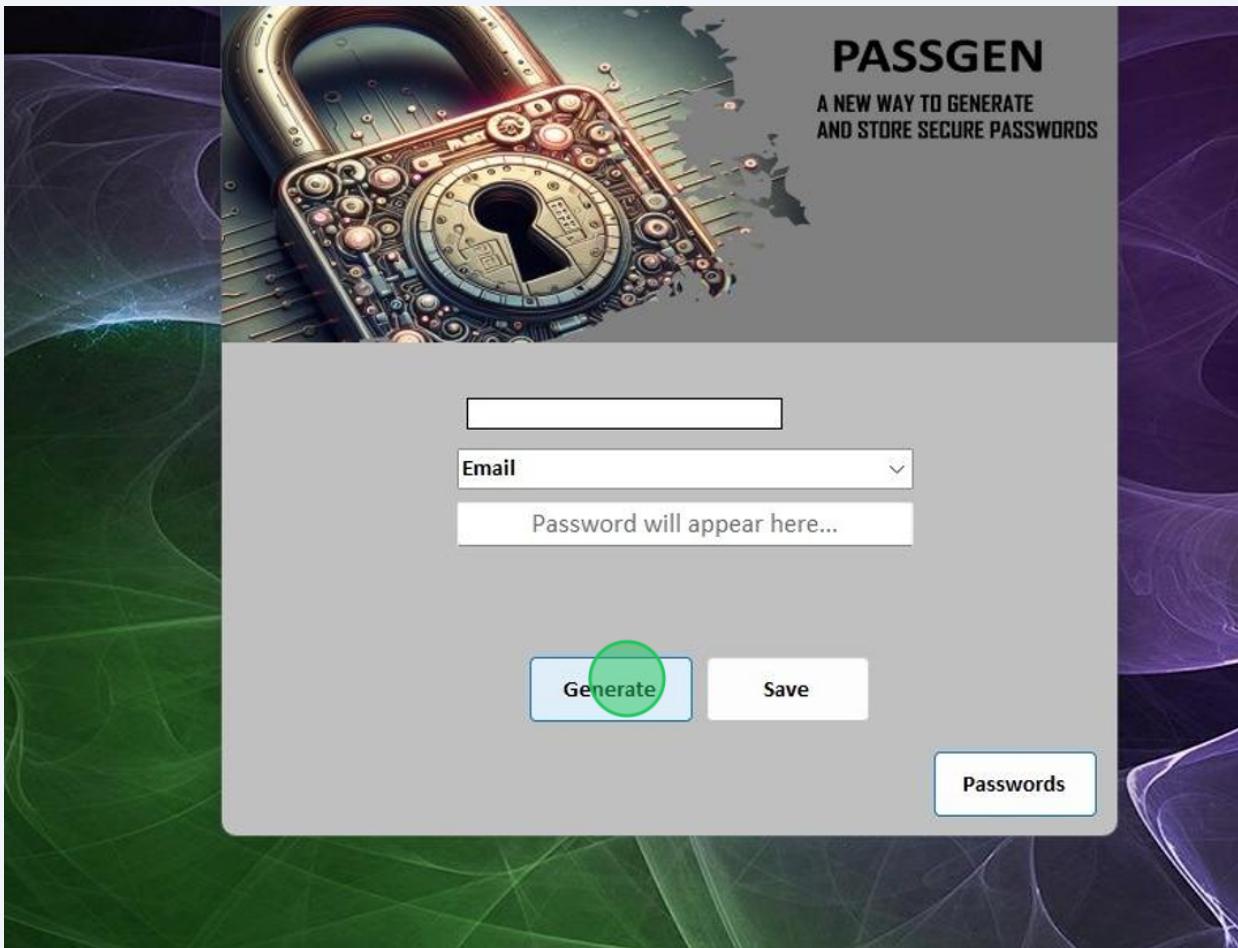

A Quick User Start-up Guide.

1

After launching the App, click the dropdown menu to select a label for the password you wish to create (for this example we chose **Email**).

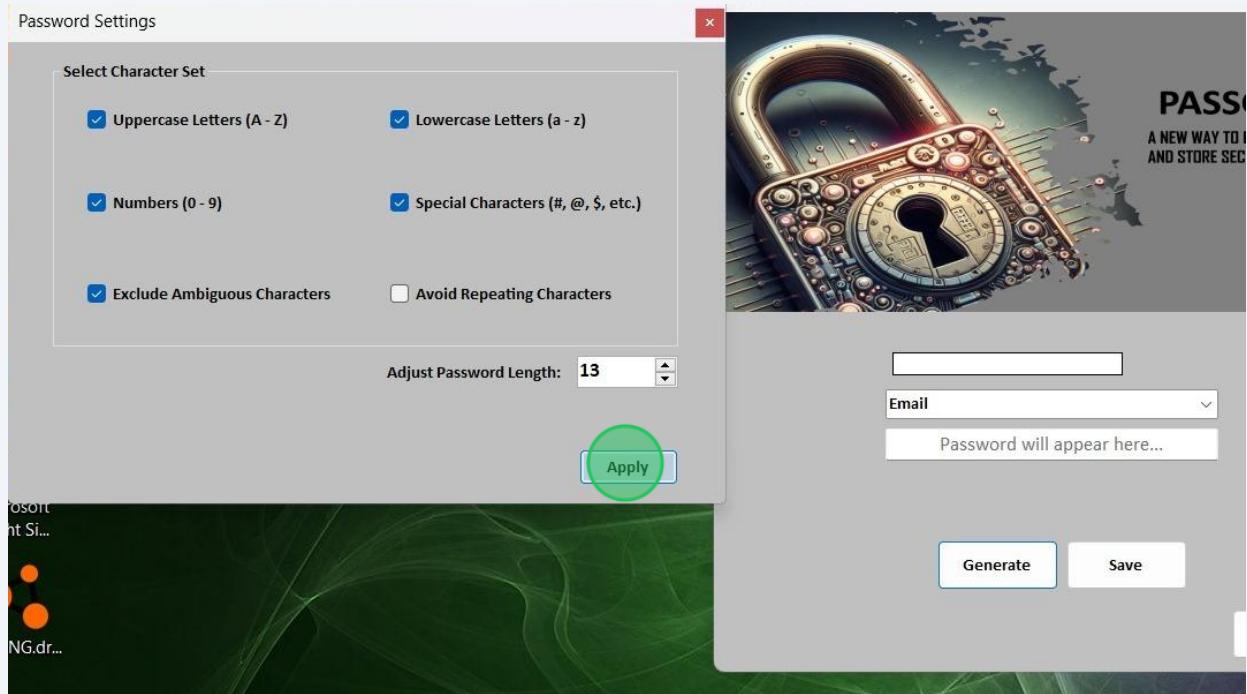

- 2 Click "Generate" to initiate the password generation.

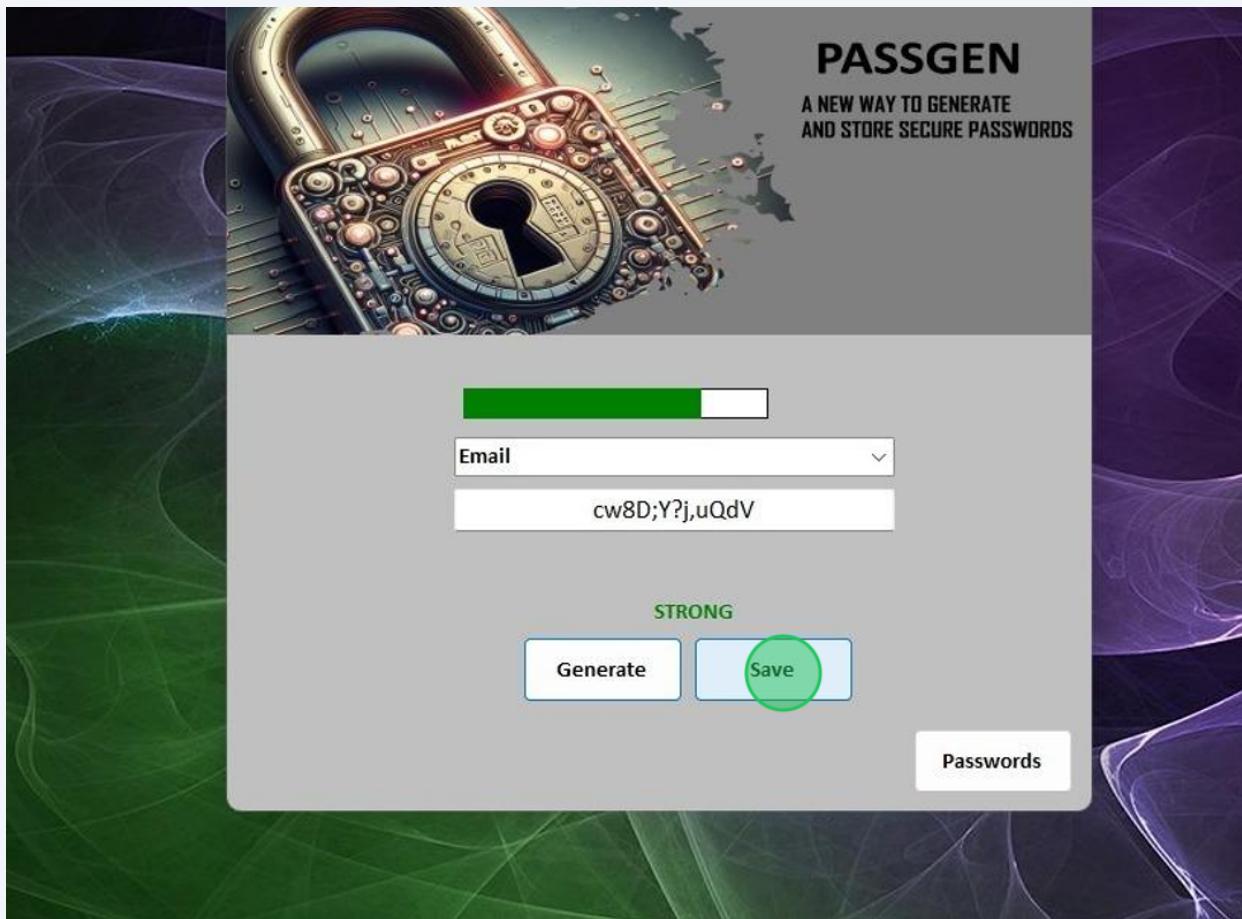

3

After you select which rules to apply to the new password, click "Apply".

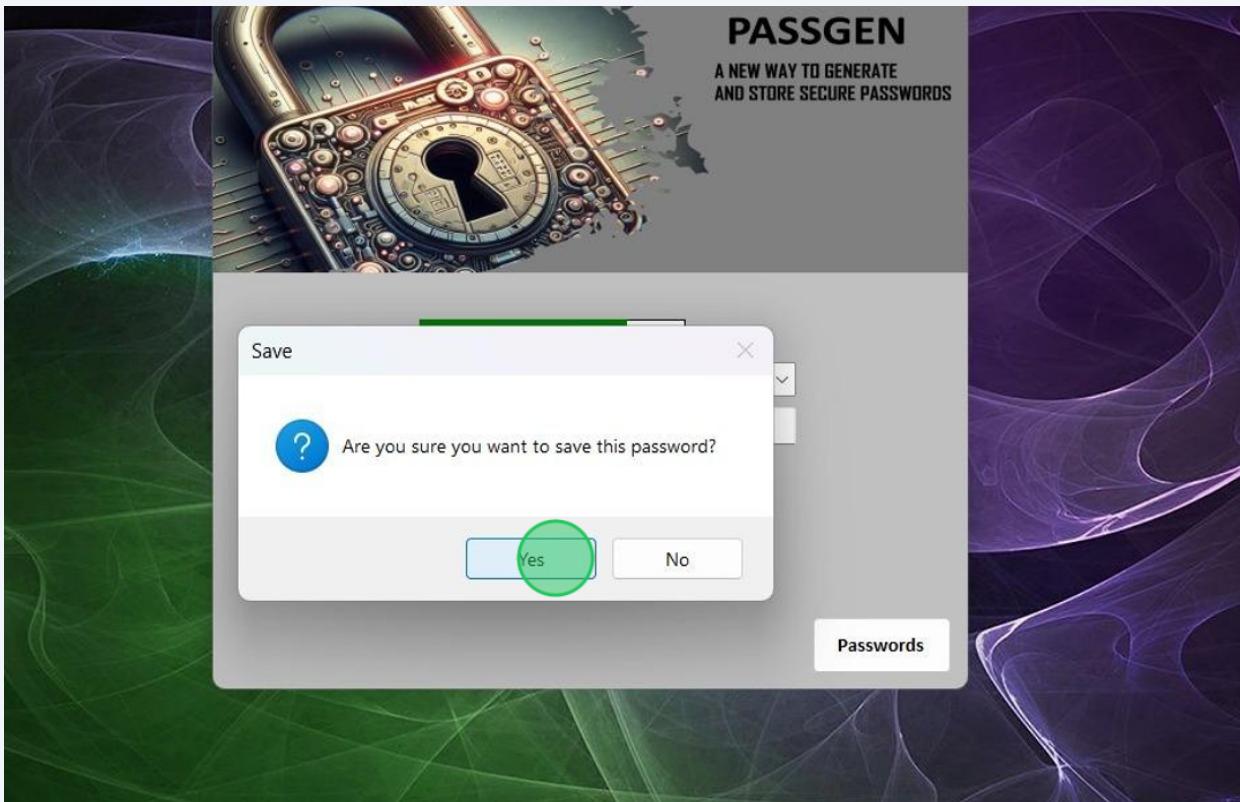

4

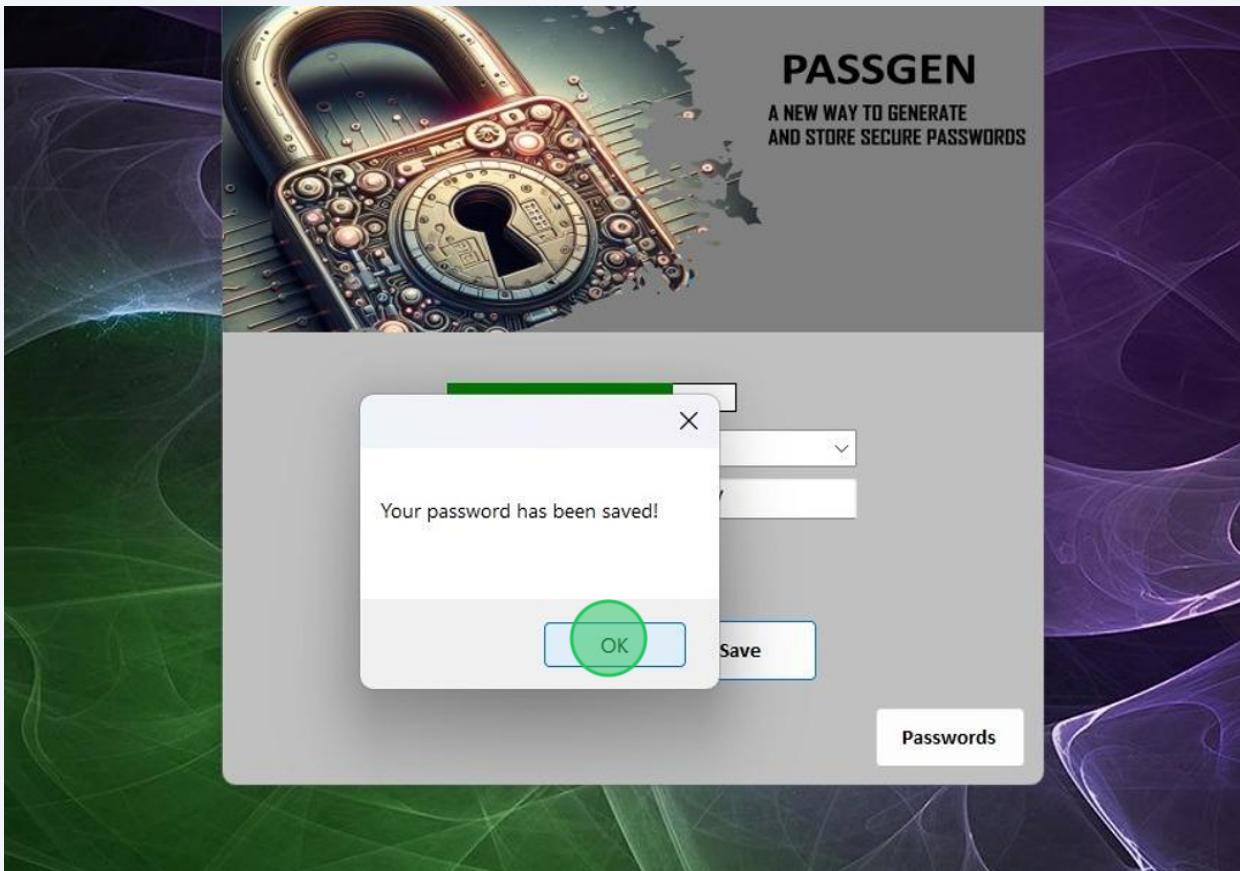

The home screen will now display the created password as well as provide a calculated estimate on the strength of it. Click "Save" to encrypt and save the password in the database.

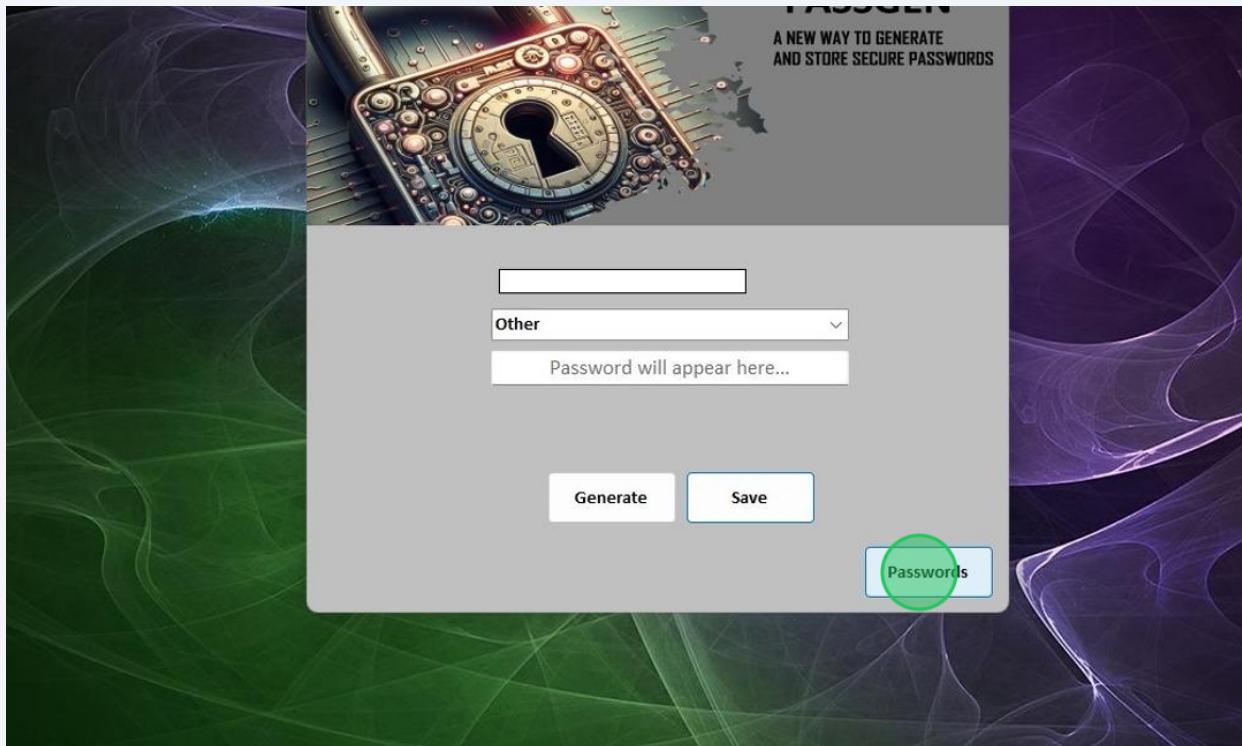

- 5 Click "Yes" to confirm.

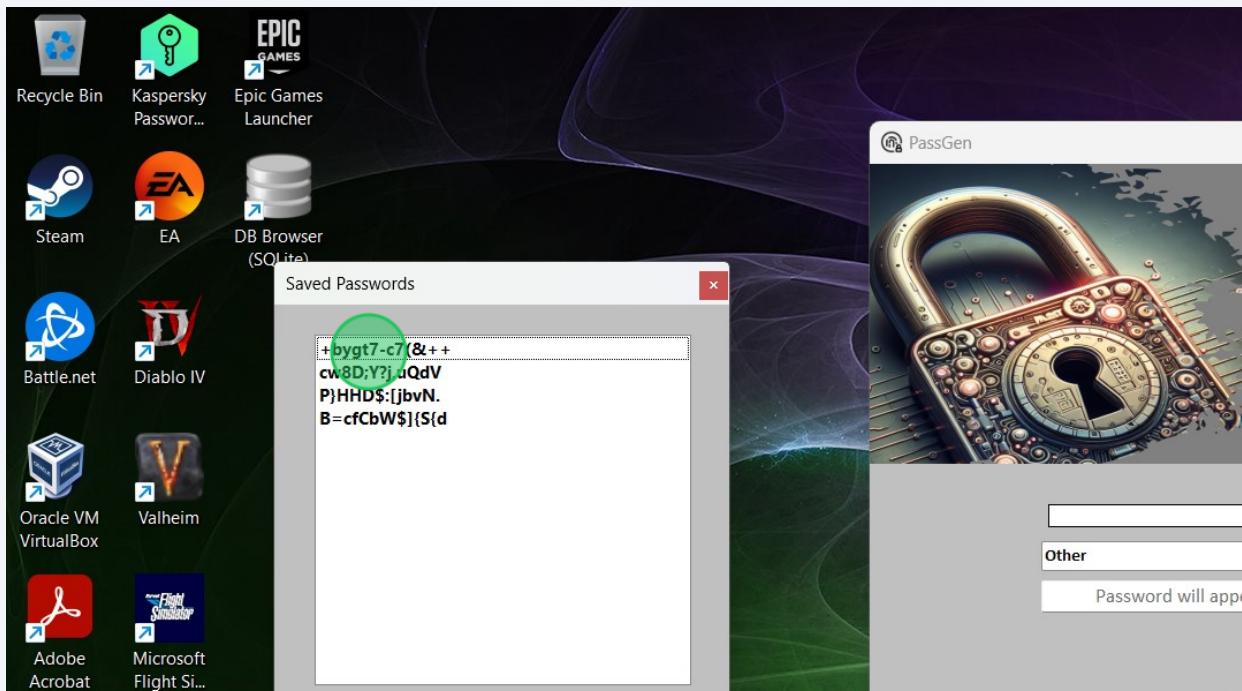

- 6 Prompt will show successful save. Click "OK" to continue.

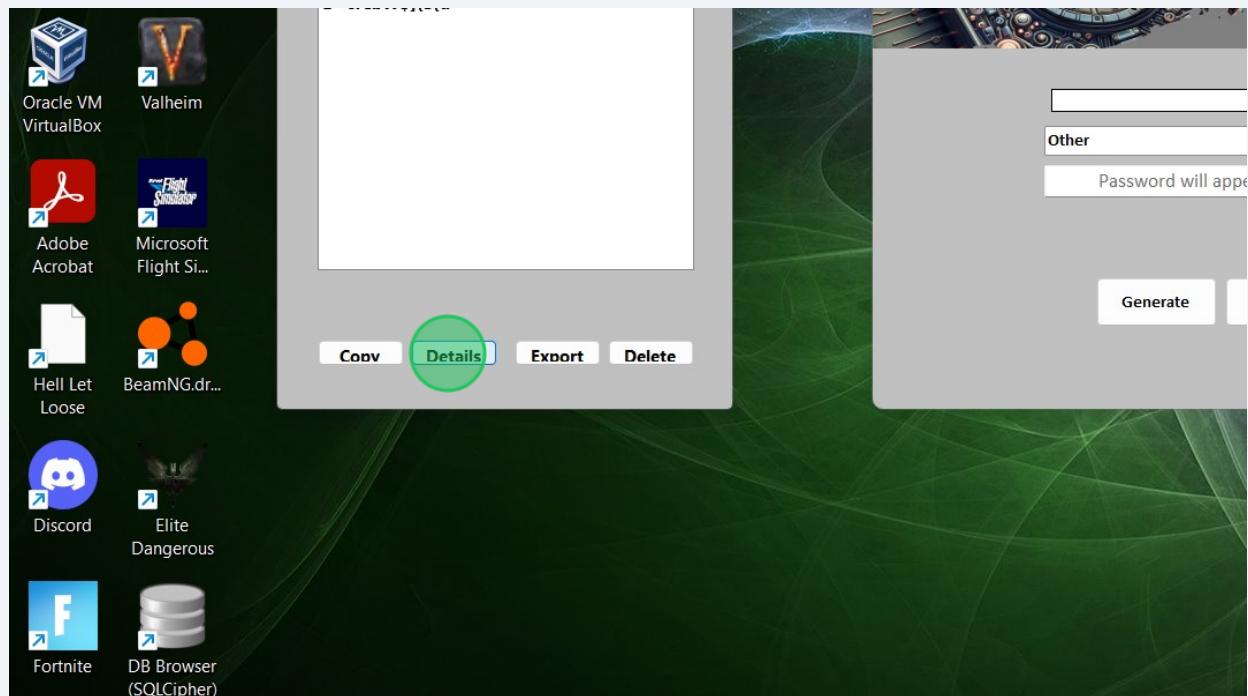

- 7 Click "Passwords" to view currently saved passwords in the database.

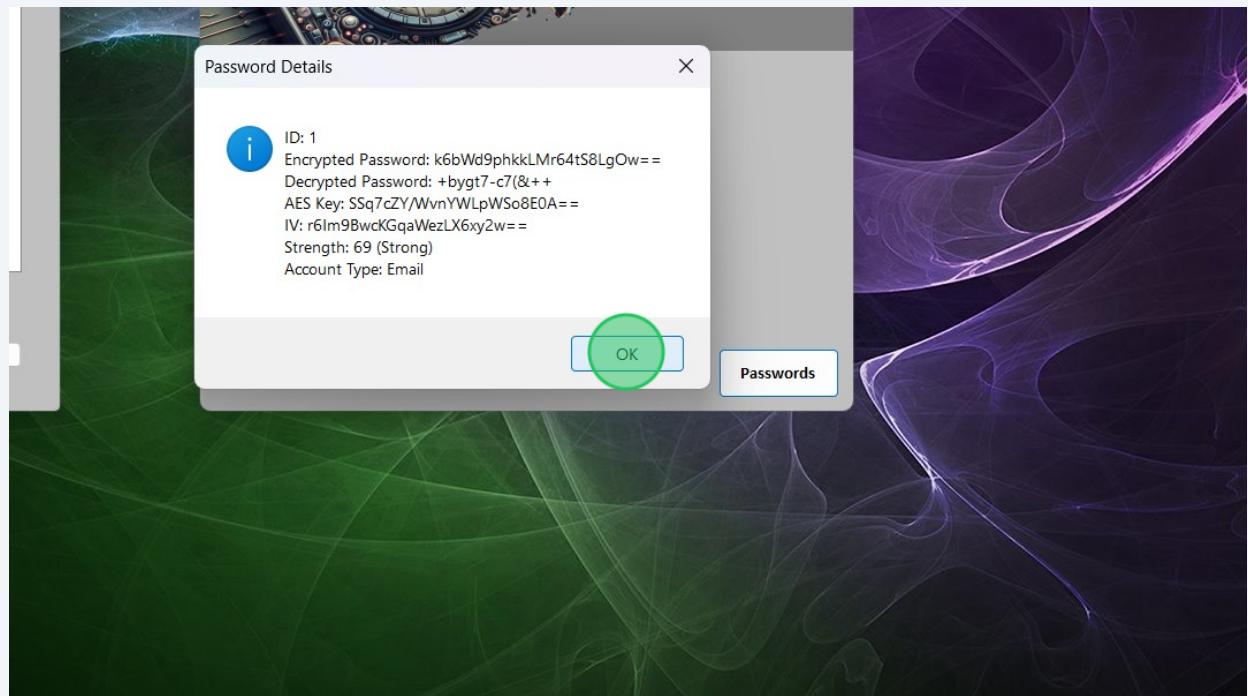

- 8 To see the details of a password, first select it, in this example we will choose the password "+bygt7-c7(&++".

**9** Click "Details"

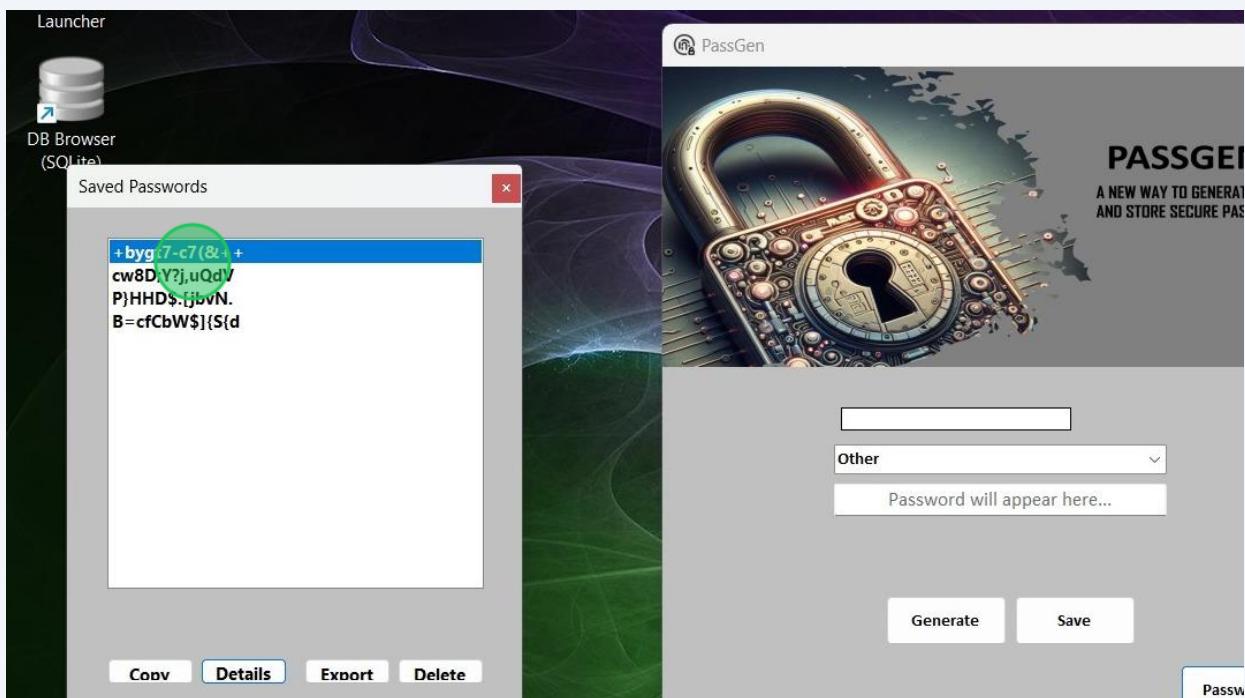

**10** A window will then pop up and display the details of the password. Click "OK" to continue.

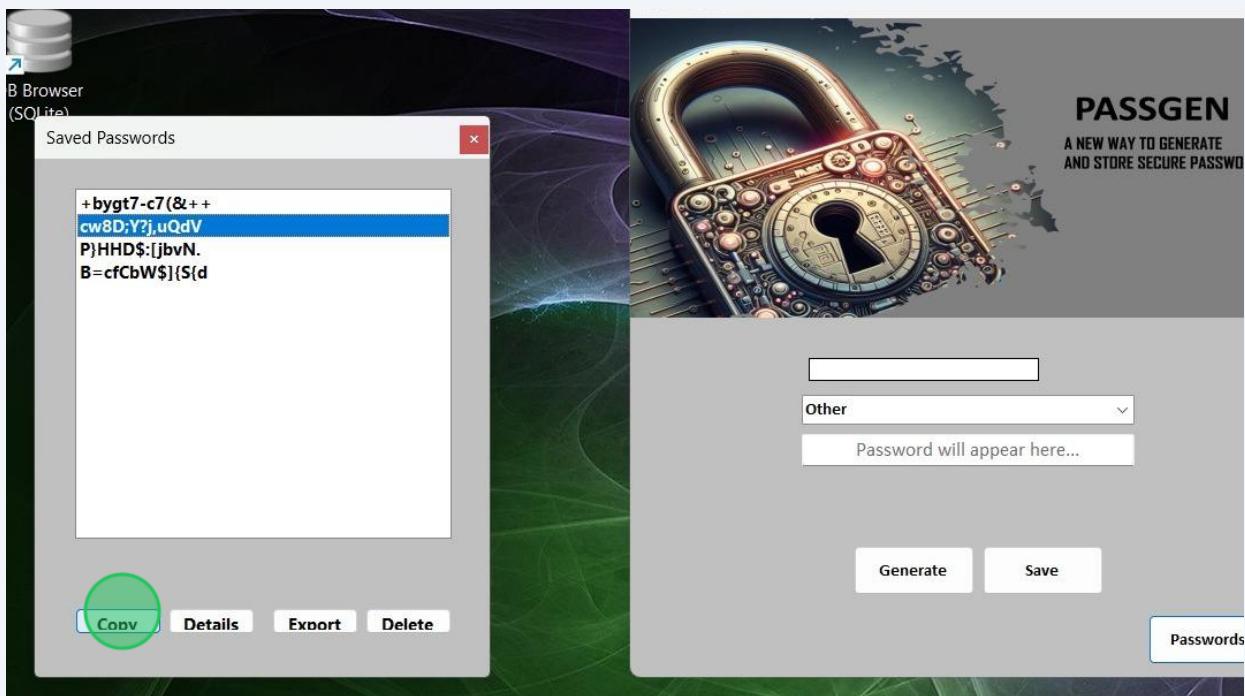

11

To copy a password, select the desired password. In this case we will choose "cw8D;Y?j,uQdV"

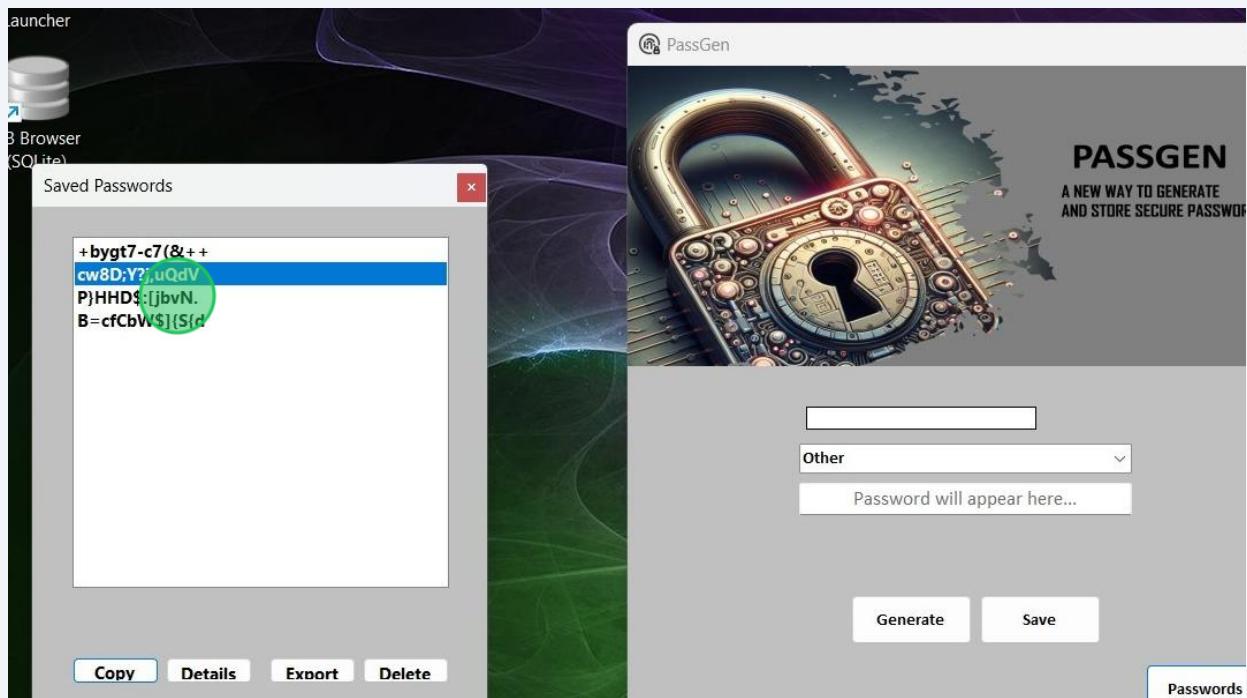

12

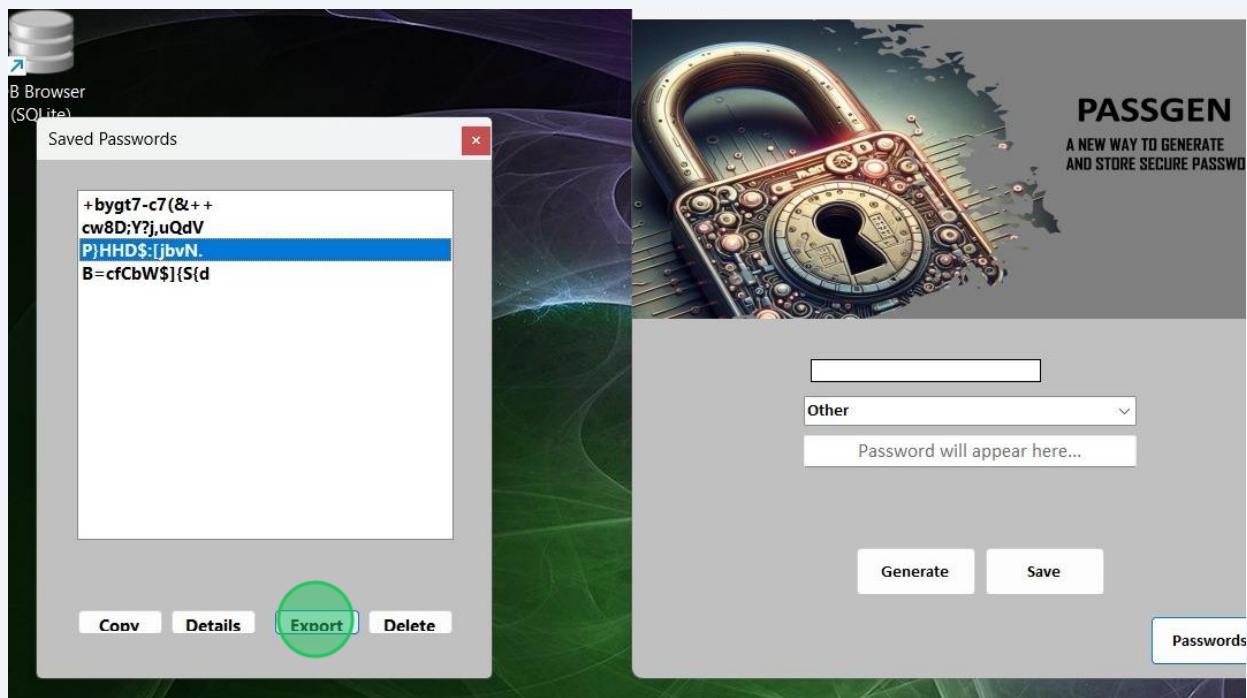

Click "Copy"

**13** Click "P}HHD\$:[jbvN."

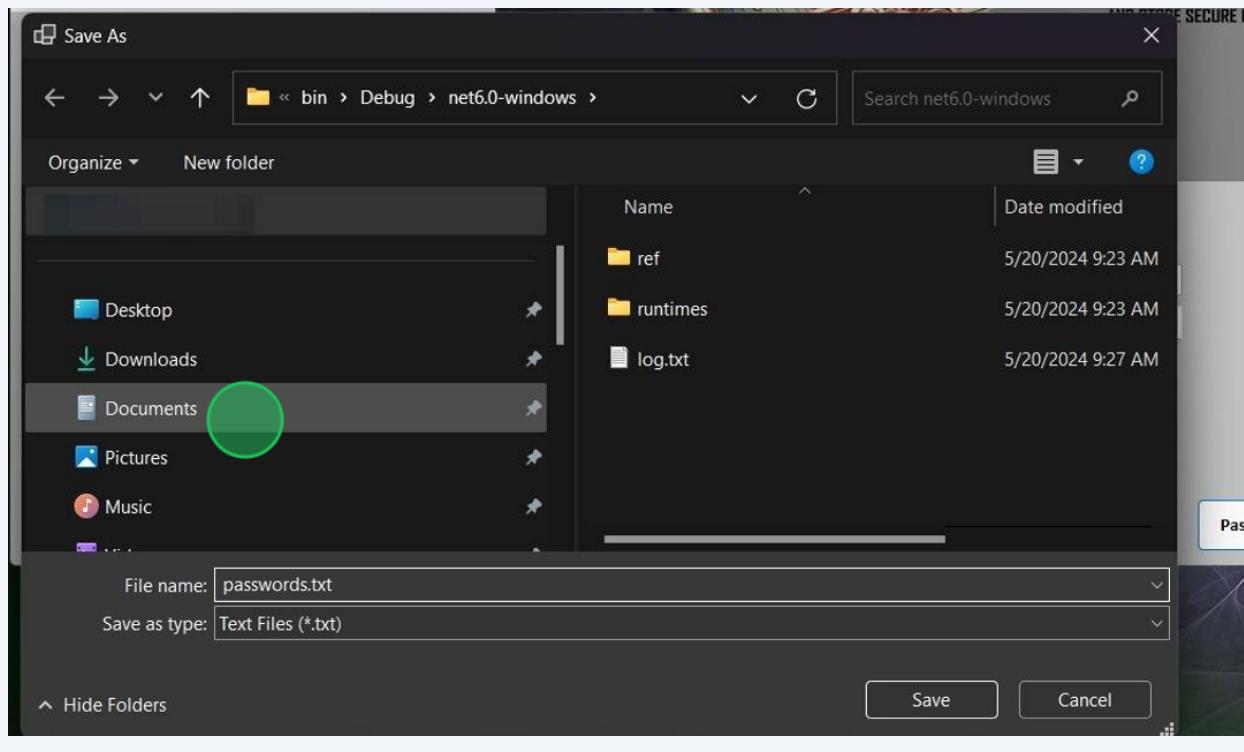

**14** To export and save the current generated passwords, Click "Export"

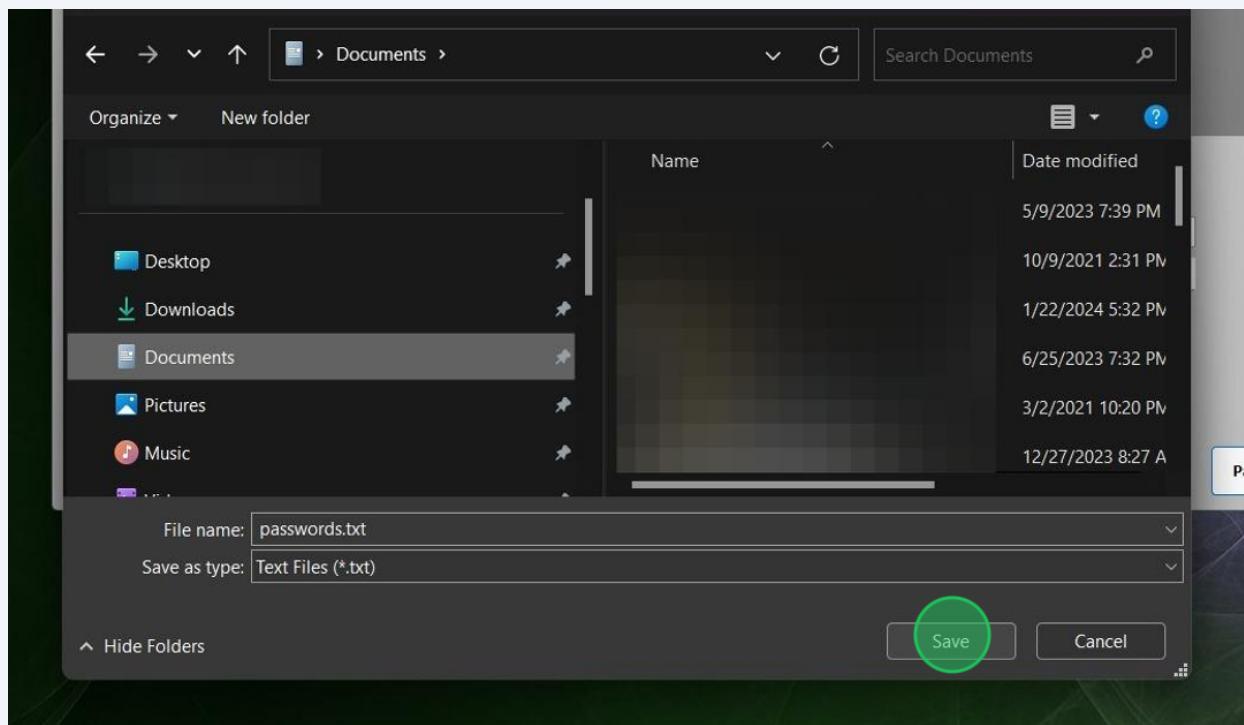

15

Choose a location to save the ".txt" file, in this example we will choose "Documents".

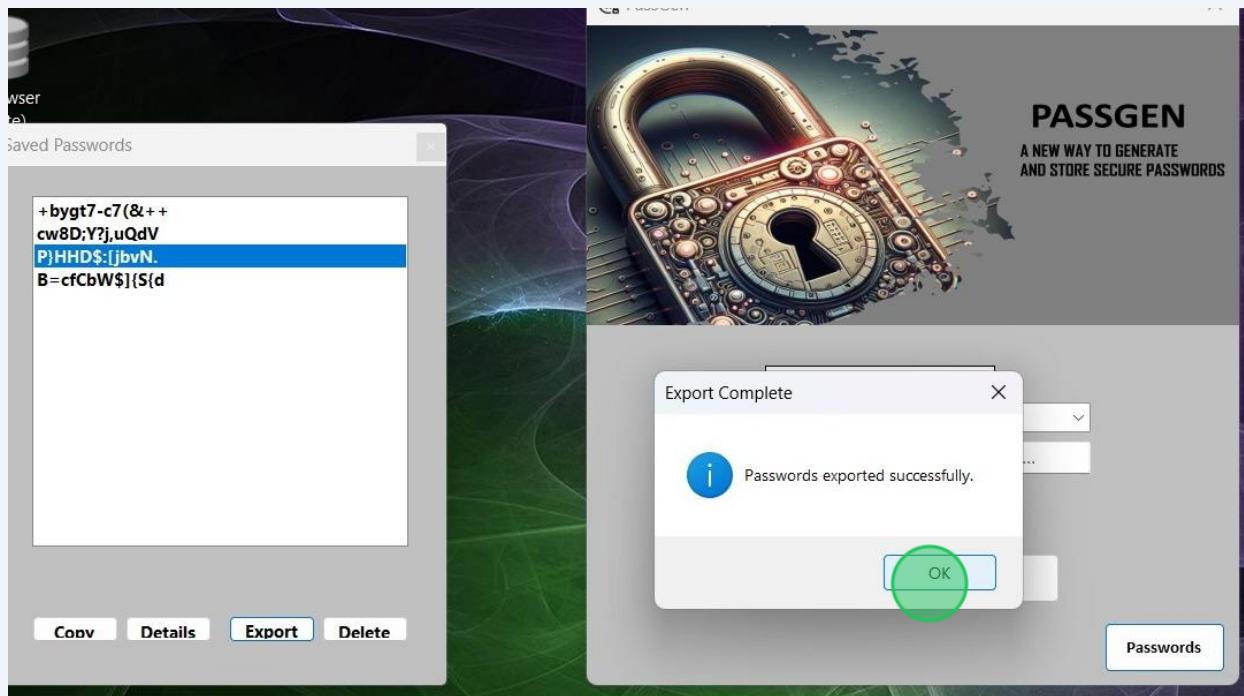

16

Click "Save" to complete.

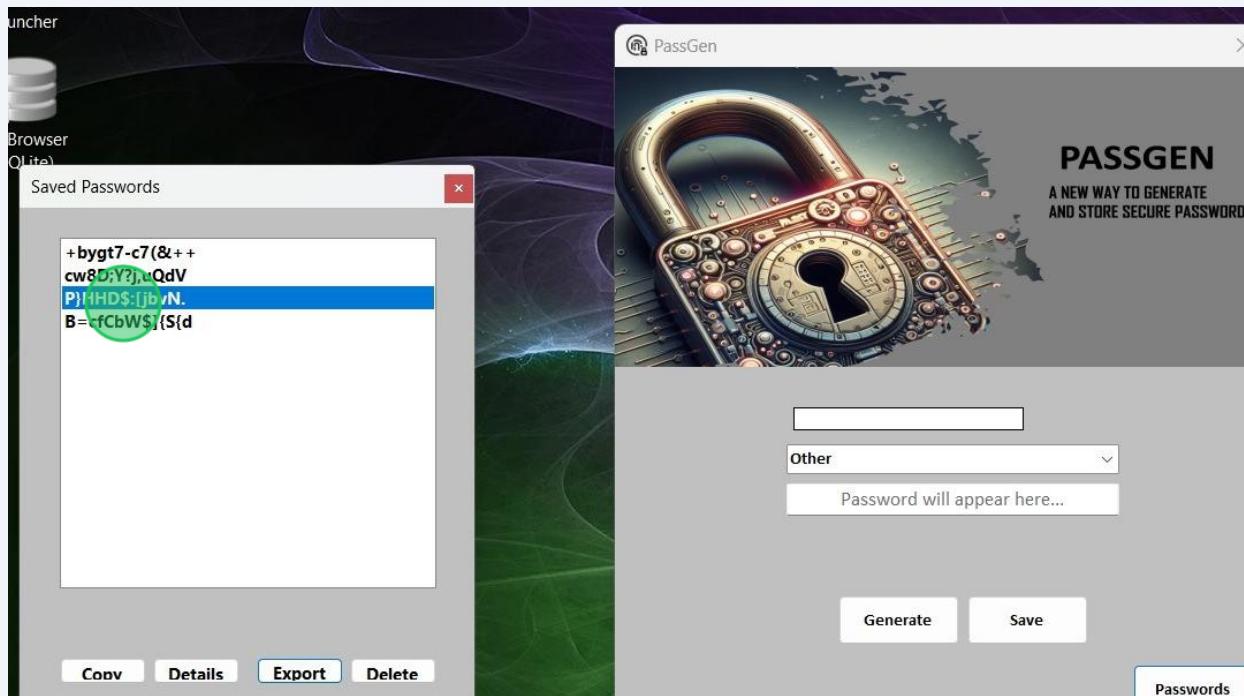

17

Your saved passwords will now be on a ".txt" file located in the file path you chose. Click "OK" to continue.

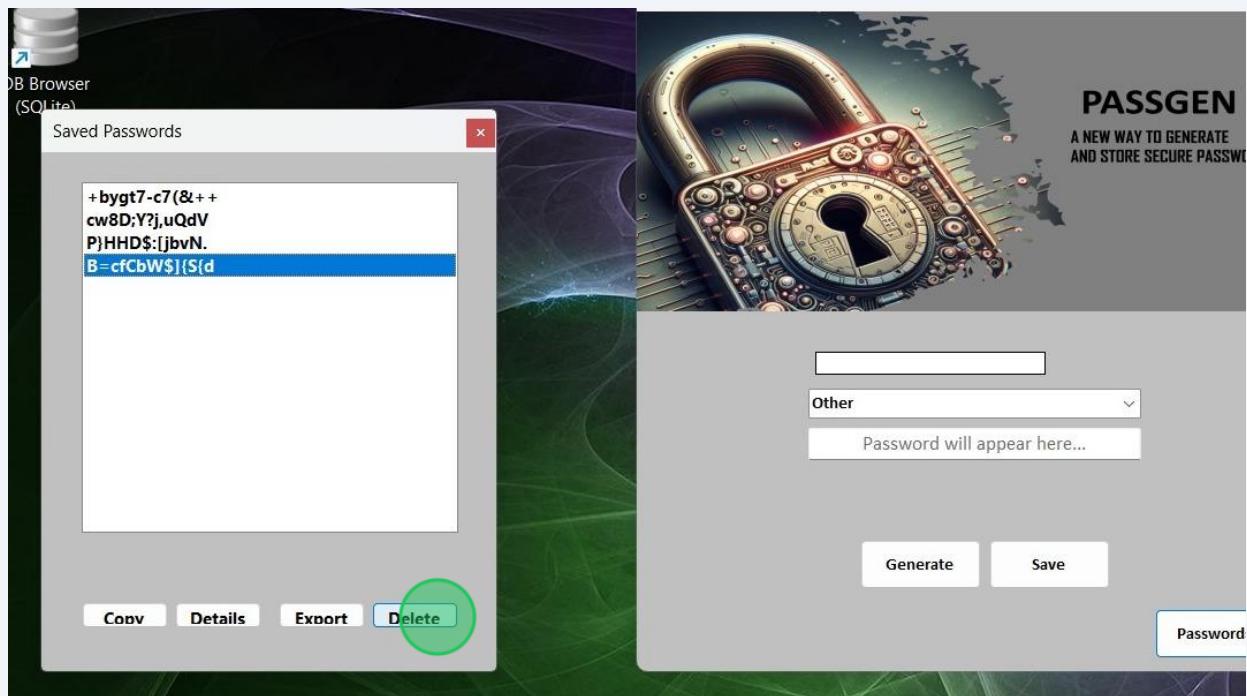

18

To delete a password, first select it, for this example we will select "P}HHD\$:[jbvN." to delete.

**19** Click "Delete"

**20** To confirm permanent deletion, click "Yes"
